ASSESSMENT LEVEL TWO (2)

Securing the Exterior of Educational Facilities

Fortifying the First Line of Defense: A Comprehensive Approach to School Exterior Safety

The Level 2 Assessment within the SITE| SAFETYNETSM framework focuses on the critical importance of securing the exterior environments of educational facilities. This assessment delves into meticulously examining the school's outer perimeters, including access points, fencing, lighting, and surveillance systems. Our approach aims to fortify the first line of defense against potential threats by identifying vulnerabilities and recommending enhancements. Through strategic improvements in physical barriers, visibility, and monitoring capabilities, we guide schools in creating a safer, more secure outdoor environment. This layer of protection is essential in deterring unauthorized access and providing a safe setting for students and staff, thereby reinforcing the overall security posture of educational institutions.

ASSESSMENT LEVEL TWO (2)

Securing the Exterior of Educational Facilities

Defense: A Comprehensive Approach to School Exterior Safety

The SAFETYNETSM framework focuses on the critical importance of securing the exterior environments of educational facilities. This involves thoroughly examining the school's outer perimeters, including access points, fencing, lighting, and surveillance systems. By establishing a strong line of defense against potential threats by identifying vulnerabilities and recommending enhancements, schools can significantly reduce risks. Through barriers, visibility, and monitoring capabilities, we guide schools in creating a safer, more secure outdoor environment. This approach is essential in deterring unauthorized access and providing a safe setting for students and staff, thereby reinforcing the institution's commitment to safety.
