

An Essential *Real-Time* Safety Assessment Your District Might Be Missing: Affordable and Parent-Approved

SITE| SAFETYNETSM delivers unparalleled, real-time safety assessments for K-12 schools, available every day of the year—a feature unmatched by other safety solutions. Our cloud-based platform methodically evaluates your school's safety across three comprehensive levels, through 60 detailed sections, and via 900 directed questions, ensuring every aspect of your campus is continuously monitored.

For just \$990.00 annually—less than the cost of a computer—you gain comprehensive access to real-time safety throughout the year. Our assessments cover:

- Level 1: Police, Stakeholder Partnerships
- Level 2: Campus Exterior
- Level 3: Campus Interior

Following any of these assessments, an automated, detailed report is instantly produced. This report not only identifies areas in need of improvement but also tracks enhancements from previous evaluations. Our dynamic safety scoring system ensures that all stakeholders are consistently informed about the progress of safety measures in real-time.

Moreover, our cloud-based system offers auto generated dashboard reports that clearly display your school's safety strengths and areas that need urgent attention. Each of the 60 sections is scored individually, with each level receiving an overall score to aid in ongoing monitoring and continuous improvement of safety protocols throughout the school year. These dynamic scores serve as benchmarks for systematic enhancement, supporting ongoing improvements in safety scores quarter-by-quarter and throughout the year.

Our instant, automatically generated reports are essential tools for maintaining transparency and vigilance. They play a crucial role in keeping parents, stakeholders, and the school community well-informed and actively engaged in collective efforts to enhance safety throughout the entire school year, in real-time.
